Week = 1 29/09/26

1. Implement Tic-Tac-Toe game in general without using any standard algorithm. Game should be played b/w Human and Computer.

1. Start the program.
2. Initialize a 3x3 board with all cells empty.
3. Assign Symbols:
   Human → X
   Computer → O
4. Display the empty Tic-Tac-Toe board.
5. Human's turn:
   Ask the Human to select an empty cell.
   Place X in the selected cell.
   Display the updated board.
6. Check whether Human has won by checking all rows, column and diagonals.
   If any row, column or diagonal contains three X, declare Human as winner.
   Stop.
7. Check whether all cells are filled.
   If board is full and no one has won, declare the game as Draw.
   Stop.
8. Computer's turn:
   Select an empty cell.
   Place O in the selected cell.
   Display the updated board.

9. Check whether the ~~board~~ Computer has won by checking all rows, columns, and diagonals.

If any row, column or diagonal ~~is~~ contains three O, declare Computer as winner.

Stop.

10. Check whether all cells are filled.

If the board is full and nobody won, declare the game as Draw.

Stop.

11. If game is not over, return to step:5 and continue alternating between Human and computer.

12. Stop the program.
