2. Implement Vaccum Cleaner Agent using concept of Simple Reflex agent and Goal based architecture.

1. Start the program.
2. Initialize two rooms, A and B with either Clean or Dirty status
3. ~~Initialize~~ Place vaccum location.
4. Define the goal state as:
   Room A = Clean
   Room B = Clean
5. Sense the current room and its cleanliness status.
6. If current room is Dirty:
   perform the Suck action and make the current room clean.
7. If the current room is Clean:
   If vaccum in Room A then move vaccum to room B.
   If vaccum is in Room B then move vaccum in Room A.
8. After every action, check the goal condition.
9. If both Room A and Room B are clean:
   stop the program.
   Display "Both rooms are clean".
10. Otherwise, repeat Step 5 - 10 until the goal state is reached.
11. Stop.
